Issues Addressed

Ref.	Raised	Description	Status
ER-1364	08/03/2024	<p>A deadlock while processing concurrent planned outage files occurred, the shared index was not pre-reserved and caused one of the files to relinquish its locks, the reprocessing of the file failed and had to be resubmitted (where it completed successfully)</p> <p>This change ensures the index is reserved by each thread and fully locked in the correct order.</p> <p>(There is a separate issue regarding batch file recovery (which is the fall back for contention errors). The fall back failed to identify the correct restart point as the EIEP5A file layout contains two HDR records (batch and EIEP5A headers) causing the fallback recovery process to restart at the incorrect point. This will be addressed under a separate ticket)</p>	Complete
