Dear David

Amendment to Registry Manager Market Operator Service Provider Agreement

I refer to the Registry Manager Market Operator Service Provider Agreement (MOSPA) between the Electricity Authority (Authority) and Jade Software Corporation (NZ) Limited, dated 25 January 2017, relating to services provided by Jade Software Corporation (NZ) Limited as the registry manager.

The Authority would like to amend the functional specification in Schedule 3 of the MOSPA, as follows:

- NP-030: correct the description in the Metering Event Notification file format
- PR-250: remove the restriction that a trader must be marked as being in default in the registry before the PR-250 report can be run
- RS-050:
 - remove restriction that a trader in default cannot be sent an RR through the registry
 - minor format and data corrections to RS-050 examples
- TD-100: new file format to create the switch template file (CS) for a trader in default (CR-1219)
- Appendix 1: amend information on where the ICP checksum can be obtained.

A copy of the functional specification with these proposed amendments incorporated is attached to this letter. If you agree to it, the amended functional specification in Schedule 3 of the MOSPA will become version 22.26.

Please confirm your acceptance of the amendments proposed in this letter by signing and returning a copy of this letter to me. These proposed amendments to the MOSPA will take effect on the date you sign this letter.

Yours sincerely

Rory Blundell
General Manager Market Performance
